

ABSTRACT

A portable videodisc player with a screen which is axially and upwardly rotatable. The player has a screen, which is rotatable within 180 degrees relative respectively to the vertical and horizontal axes. The player has a main body having a disc driver and a disc information read/processor, and a display cover board having a screen. An upturn hinge is found at an edge of the main body and an edge of the display cover board. A cable connects the main body and the display cover board. The main body of the upturn hinge is a T-shaped cannula. A horizontal end of the cannula is fixed on the side of the display cover board and is a shaft having a damper. A vertical end is used as a rotation shaft which is mounted on the main body. A cable passes through the inner hole of the main body of the upturn hinge to connect the main body of the player and the display cover board.
